## Supercal 98G Pelletized Lime.

One more thing ... we named it "98" because it is 98% pure calcitic limestone, the finest on the planet. Manage your soil pH with a product that really works...

*See how much you'll save!*

Learn more by going to [www.CalciumProducts.com](http://www.CalciumProducts.com) and use the Supercal 98G Calculator to compare the numbers for your farm.

**THE ANSWER IS ... THE SOIL!**

# WHY ISN'T MY YIELD BETTER?

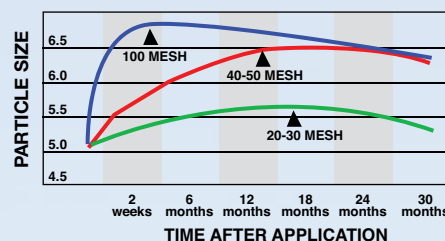

When the pH of your soil is low, your yields stay low ... it's that simple. Low soil pH needs to be addressed and with **SuperCal 98G** from Calcium Products, the fix is fast, lasting and cost effective.

## NITROGEN IS THE CAUSE

All nitrogen fertilizers contain hydrogen. The hydrogen in fertilizer lowers the pH of your soil. When soil pH is low, it doesn't matter what hybrid you plant, or how much fertilizer you put on your field, your yields will suffer. Using **SuperCal 98G** pelletized lime quickly balances your soil pH. The end result is a dramatic increase in yield.

## NEW TECHNOLOGY IN LIMING

For generations producers have turned to traditional ag lime in an attempt to maintain proper pH levels. The trouble is, most ag lime is either too fine – allowing it to blow away – or so coarse that it just “sits there” like road stone. **SuperCal 98G** is “just right”. It drops directly onto the soil and goes to work immediately. (See the graph to the right.)

## BETTER LIME STARTS WITH BETTER INGREDIENTS

**SuperCal 98G** is produced from nearly pure Calcium Carbonate (limestone). We grind the lime to a fine powder then uniformly pelletize it. **SuperCal 98G** applies easily, evenly, and more effectively than ag lime.

## SUPERCAL 98G ANALYSIS

Calcium Carbonate .....	95% minimum	Binder (calcium lignin sulfonate) .....	less than 2%
Magnesium Carbonate .....	less than .5%	98G Bulk Density .....	72 lbs per cu. ft.
Moisture .....	less than 1%	98MG Bulk Density .....	70 lbs per cu. ft.

## TYPICAL 98G SIEVE ANALYSIS PRIOR TO GRANULATION

90% passing through 200 mesh | 95% passing through 100 mesh | 100% passing through 50 mesh

## SUPERCAL 98G STATE REGISTRATION NUMBERS

Iowa – 1820 ECCE | Minnesota – 1849 ENP | Wisconsin – 90-99 (index zone)  
Nebraska – 91% ECCE | Missouri – 720 ENM

## WHY SUPERCAL 98G PELLETIZED LIME?

- SuperCal 98G** can be blended with dry fertilizer and spread in one pass.
- SuperCal 98G** improves the performance of fertilizers and herbicides.
- SuperCal 98G** can reduce your seed, fertilizer and herbicide costs.
- SuperCal 98G** improves nitrogen fixation by soybeans and alfalfa.
- SuperCal 98G** is OMRI listed.
