SuperCal SO4UGG is a naturally mined gypsum product which adds sulfur and calcium, two necessary plant nutrients, to the soil. SuperCal SO4UGG is pelletized which makes handling and uniform distribution easy and quick.

Ultra Greens Grade pellets are ultra-small to ensure the pellets disappear quickly on golf greens.
Add sulfur and calcium and amend soils with SuperCal SO4UGG ultra greens grade gypsum.

RECOMMENDATIONS

It is recommended that a complete soil test be taken to determine pH and nutrient levels before applying any material to the soil. Soil test data allows you to determine the most efficient, effective application rate.

SuperCal SO4UGG is a finely ground, pure, mined gypsum pelletized for ease of use. It will deliver a high level of readily available calcium and sulfur to the soil. Calcium and sulfur are vital secondary nutrients and are required by plants for improved growth and vigor.

The pelleting of the gypsum allows for uniform application and ensures that the product reaches the soil even though the plant foliage may be dense. A minimum amount of moisture is required to activate the product. However, for best results, spread product and water thoroughly for incorporation into the soil.

Regular applications of SuperCal SO4UGG will:

- Supply calcium and sulfur, vital nutrients for optimum plant growth.
- Reduce surface crusting of soils, improving water penetration and seedling emergence.
- Loosen heavy clay soils to improve rooting and water infiltration.
- Help remove sodium from soils, improving plant growth.

Application

For new turf
Apply 20 lbs per 1,000 square feet before seeding or sodding. Water thoroughly after application.

For established turf
Apply 10 lbs per 1,000 square feet each spring and fall. Water thoroughly after application.
