

Illinois Research Summary

YIELD RESULTS

Average yield increase of 12 bu/A vs. no sulfur

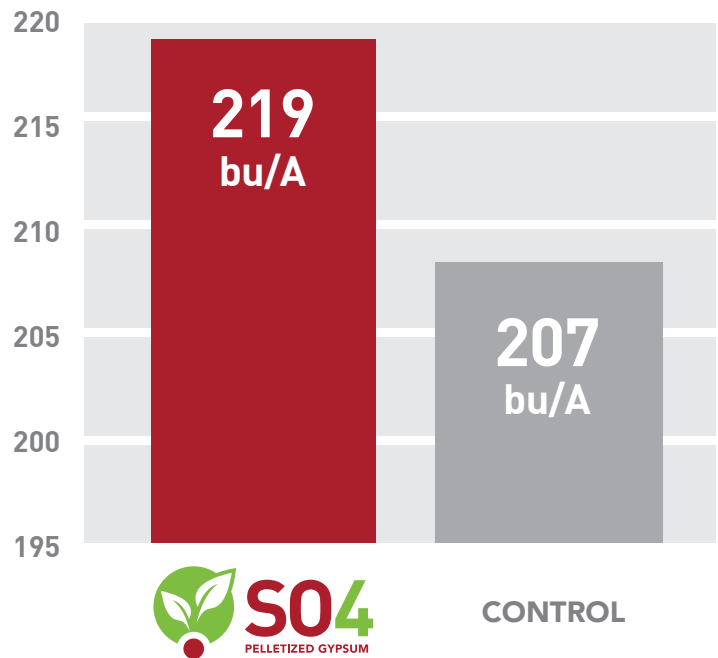

Overview

A series of trials were conducted in Illinois to evaluate the effect of SO4 on corn yields as a sulfur source compared to no sulfur.

Background

- Replicated dealer trials
- 7 replications in 2 counties
- Silt loam and sandy loam soils
- Average application rate of 150 lbs/A (25 lbs Sulfur/A)
- Trials included pre-plant applications

SO4 Increases Corn Yields

HIGHLIGHTED TRIALS

Bureau County

- Location: Princeton, IL
- Sandy loam soil type
- SO4 Rate: 100 lbs/A pre-plant
- 18 bu/A increase

Williamson County

- Location: Marion, IL
- Silt loam soil type
- SO4 Rate: 200 lbs/A pre-plant
- 9 bu/A increase
