RECOMMENDATIONS

It is recommended that a complete soil test be taken to determine nutrient levels before applying any material to the soil. Soil test data allow you to determine the most efficient and effective application rate.

Typical Spreader Settings

Apply only as directed. Do not apply near water.

Table with 4 columns: Spreader Type, Application Rate (10 lbs/1000 sq. ft.), Spreader Type, Application Rate (10 lbs/1000 sq. ft. equivalent to 435.6 lbs/acre). Rows include Scotts AccuGreen, Earthway, Precision Brand, and Vigoro.

Actual settings may vary and depend on spreader type, mode and condition of the spreader. Always check spreader rate and setting prior to application of SO4 Mini Pelletized Gypsum. Bulk Density - 61 lbs/CF

Guaranteed Analysis

Calcium (Ca) 21%
Sulfur (S) 17%
17% Combined Sulfur
Calcium Sulfate (CaSO4) 72%
Calcium Sulfate Dihydrate (CaSO4 • 2H2O) 92%

Derived from: Gypsum
