

Illinois Corn Yield Summary

YIELD RESULTS

Average yield increase of 12.2 bu/A vs. no sulfur.

Overview

A series of trials were conducted in Illinois to evaluate the effect of SO4 on corn yields as a sulfur source compared to no sulfur.

Background

- 2014 - 2019
- Dealer & third-party trials
- Trials conducted in 7 counties
- Various soil types
- Average application rate 190 lbs/A (32 units sulfur/A)
- Trials included pre-plant applications

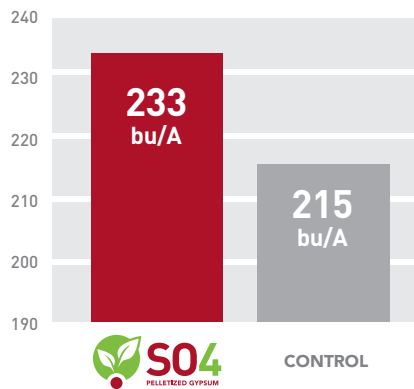

SO4 Increases Corn Yields

HIGHLIGHTED TRIALS

Bureau County

- **Location:** Princeton, IL
- Sandy loam soil type
- **SO4 Rate:** 100 lbs/A pre-plant
- 18 bu/A increase

Washington County

- **Location:** Okawville, IL
- Clay loam soil type
- **SO4 Rate:** 200 lbs/A pre-plant
- 12.6 bu/A increase
